

PROBLEMA 8.5

$$f(x) = \frac{x \log^2 x}{1 + \log x}$$

$$\text{Dom } f = \{x \in \mathbb{R} : x > 0 ; 1 + \log x \neq 0\} = (0, \frac{1}{e}) \cup (\frac{1}{e}, \infty)$$

$$f \in C^\infty(\text{Dom } f)$$

$$f'(x) = \frac{(2 + 2 \log x + \log^2 x) \log x}{(1 + \log x)^2}$$

$$f''(x) = \frac{2 + 2 \log x + 3 \log^2(x) + \log^3 x}{x (1 + \log x)^3}$$

• CRECIMIENTO Y DECRECIMIENTO :

$$\text{Puesto que } z^2 + 2z + 2 > 0 \quad \forall z \in \mathbb{R}$$

$$\log^2 x + 2 \log x + 2 > 0 \quad \forall x > 0$$

$$\text{Por tanto: } \text{signo}(f'(x)) = \text{signo}(\log x)$$

$$\text{Puesto que: } \lim_{x \rightarrow 0^+} f(x) = \lim_{x \rightarrow 0^+} \frac{x \log^2 x}{1 + \log x} = 0$$

$$\bullet f(1) = 0$$

$$\bullet \lim_{x \rightarrow 1/e} f(x) = -\infty$$

$$\bullet \lim_{x \rightarrow \infty} f(x) = \infty$$
